ABOUT THE PROGRAM

The Neurology & Neuroscience Career Starter Program is designed to provide you with a strong foundation in the structure, function, and disorders of the nervous system, while introducing modern tools and clinical perspectives used in neuroscience today.

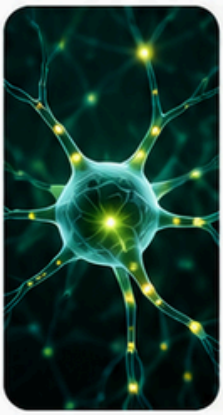

WHAT IS NEUROLOGY?

Neurology is the branch of medicine that deals with the diagnosis, treatment, and management of disorders of the nervous system.

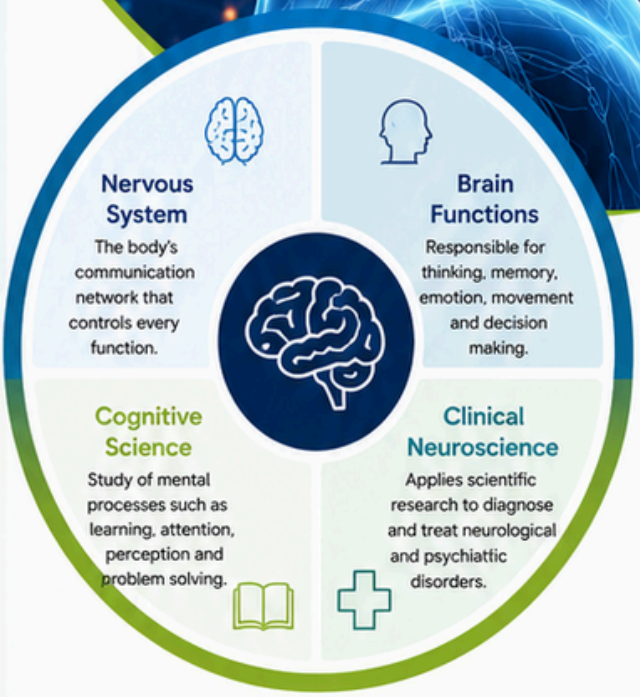

- Focuses on the brain, spinal cord and nerves
- Includes stroke, epilepsy, migraines, Parkinson's disease and more
- Combines clinical expertise with advanced diagnostic technologies

WHAT IS NEUROSCIENCE?

Neuroscience is the scientific study of the nervous system, exploring how the brain and nerves control thoughts, emotions, behavior and body functions.

- Explores neurons, synapses and neural circuits
- Studies brain development, behavior, cognition, and mental processes
- Drives innovation in treatments and brain-based technologies

WHAT YOU WILL EXPLORE

Nervous System
Understand the structure and function of the central and peripheral nervous systems.

Brain Functions
Learn how the brain controls movement, sensation, memory, behavior and more.

Cognitive Science
Explore how we think, learn, perceive and solve problems through scientific approaches.

Clinical Neuroscience
Analyze real-world neurological disorders and understand diagnostic and treatment strategies.

This program bridges the gap between science and healthcare, preparing you for a **meaningful career** in the rapidly growing field of **neurology and neuroscience.**

Internz Learn
Your Career , Our Responsibility

WHY CHOOSE THIS PROGRAM?

Our Neurology & Neuroscience Career Starter Program is designed to give you the knowledge, skills, and exposure you need to build a successful career in the field of neuroscience.

01

Industry Aligned Curriculum

Learn industry-relevant concepts and cutting-edge technologies designed by experts and tailored to current healthcare and research standards.

02

Real World Projects

Work on practical, real-world projects that help you apply your knowledge, build confidence, and create a strong portfolio.

03

Internship Certificate

Earn a recognized Internship Certificate that validates your skills and adds value to your professional journey.

04

One-on-One Mentorship

Get personalized guidance and mentorship from experienced neuroscience professionals who help you grow and achieve your goals.

05

Placement Assistance

Receive complete career support including resume building, mock interviews, and job referrals to top healthcare and research organizations.

06

Lifetime Access

Enjoy lifetime access to course materials, recorded lectures, resources, and updates anytime, anywhere.

Building the next generation of neuroscience professionals.

TOOLS & TECHNOLOGIES

Advanced tools. Real insights. Better outcomes.

Gain hands-on experience with industry-standard tools and technologies used in neuroscience research, diagnosis and treatment planning.

EEG

Record and analyze electrical activity in the brain using electroencephalography. Essential for diagnosing epilepsy, sleep disorders, and cognitive states.

MRI

High-resolution imaging technique used to visualize brain structures in detail. Critical for detecting tumors, lesions, and neurological disorders.

CT SCAN

Advanced X-ray imaging that provides cross-sectional views of the brain. Useful for trauma, bleeding, and structural abnormalities.

EMG

Measures the electrical activity of muscles and the nerves controlling them. Helps in diagnosing nerve disorders and neuromuscular diseases.

BRAIN MAPPING

Visualize and analyze brain activity patterns using advanced mapping techniques. Supports research in cognition, behavior, and rehabilitation.

DIAGNOSTICS

Integrate clinical data and imaging for accurate diagnosis. Supports evidence-based decision making and better patient outcomes.

Master the tools used by neuroscience professionals and build a strong foundation for your future in this high-impact field.

PRECISE Analysis

ACCURATE Diagnosis

DETAILED CURRICULUM

A comprehensive 8-module curriculum designed to build a strong foundation in neurology and neuroscience, combining theory, applications, and hands-on learning.

01 NEUROANATOMY & PHYSIOLOGY

- Structure of the nervous system
- Brain regions and their functions
- Neurons, synapses and signaling
- Neural pathways and circuits

02 CELLULAR NEUROBIOLOGY

- Cell types in the nervous system
- Ion channels and neurotransmission
- Synaptic communication
- Neurodevelopment and plasticity

03 COGNITIVE NEUROSCIENCE

- Brain and behavior relationship
- Attention, perception and memory
- Language and decision making
- Emotion and social cognition

04 NEUROLOGICAL DISORDERS

- Stroke, epilepsy, Alzheimer's, Parkinson's
- Multiple sclerosio and neuropathies
- Neurodevelopmental disorders
- Clinical features and pathophysiology

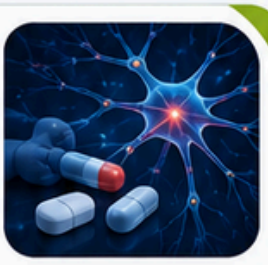

05 NEURODIAGNOSTICS

- EEG – brain activity recording
- MRI, CT and PET imaging
- EMG and Nerve conduction studies
- Interpretation of diagnostic reports

06 NEUROPHARMACOLOGY

- Drugs acting on CNS
- Neurotransmitters and receptors
- Mechanism of action
- Therapeutic uses and side effects

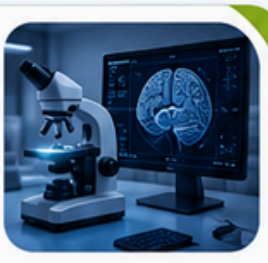

07 NEUROPLASTICITY & RECOVERY

- Principles of neuroplasticity
- Learning, memory and adaptation
- Brain recovery after injury
- Rehabilitation and therapy approaches

08 NEUROSCIENCE RESEARCH METHODS

- Research design and ethics
- Data collection techniques
- Statistical analysis
- Scientific writing and publication

From understanding the basics to exploring **advanced research – this curriculum** prepares you for a successful career in

REAL WORLD PROJECTS

Gain practical experience by working on real-time neuroscience projects that bridge the gap between theory and real-world applications.

01 BRAIN ACTIVITY MAPPING
(Mini Project)

Record and analyze brainwave patterns using EEG to understand different mental states and activities.

- **Tools:** EEG, Brainwave Analysis Software
- **Focus:** Brainwave Recording & Analysis
- **Outcome:** Insightful brain activity reports

- Collect EEG data from various activities
- Analyze brainwave signals (Alpha, Beta, Theta, Delta)
- Visualize and interpret brain activity
- Generate insights on attention and relaxation levels

02 DISORDER CASE STUDIES
(Major Project)

Investigate real neurological disorders using case studies, imaging, and clinical data to understand symptoms, causes, and treatment approaches.

- **Tools:** MRI, CT Scan, Clinical Databases
- **Focus:** Diagnosis & Clinical Analysis
- **Outcome:** Case report with diagnostic insights

- Analyze patient case data and symptoms
- Study MRI/CT scans and clinical findings
- Identify patterns and possible diagnoses
- Present evidence-based conclusions

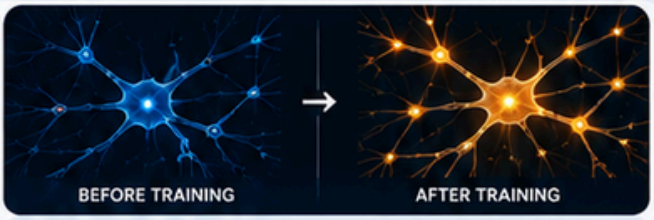

Key Insights
- Identify structural abnormalities
- Understand disorder progression
- Correlate symptoms with imaging

03 NEUROPLASTICITY STUDY
(Capstone Project)

Explore how the brain adapts and reorganizes itself through learning, memory, and rehabilitation.

- **Tools:** EEG, fMRI, Behavioral Tests
- **Focus:** Recovery & Brain Adaptation
- **Outcome:** Research report & presentation

- Design neuroplasticity experiments
- Track changes using EEG & behavioral tests
- Analyze results and measure improvement
- Propose rehabilitation strategies

Measure Improvements In:
Memory | Attention | Motor Skills | Cognition

WHY WORK ON REAL WORLD PROJECTS?

- Build practical skills
- Enhance your portfolio
- Prepare for real career challenges
- Stand out in job interviews
